

Identity Management Practices Panel

Topics

- How do you “identity proof” an individual before giving them an account or put them in the directory? How standard is this in your country and who sets such standards?
- Who is in the service domain or directory - i.e. who is your community that you serve with accounts? What is the strangest exception to your rule?
- How quickly can you provision an account? revoke an account or a privilege?
- How do you deliver the account credentials to individuals?
- How are acts of authentication implemented? (PKI token, Kerberos password, LDAP authentication, clear text password, etc. Are users ever required to change their password? Is there any two factor authentication done?
- Do you have a Web SSO? If so, what one? Can departmental apps use the service?
