# A brief history

- Initially recording of videoconference sessions
- Demand on recording lecture
- Live streaming of lectures
- Later focus on lecture recording in lecture theatre, conference presentations, inaugural lectures, ...
- First picture in picture podcast movie
- Finally media management system for audiovisual objects

# Workflow of a recording

# Demo

# SWITCHcast and the community

- System is build-on a long experience
- Users needs and requirements are incorporated continuously
- Many things are as they are because of a lack of standards for rich-media applications and coordination with other developments
- → We are ready share our experiences, our code and define new standards with the community
