

Federated Access

Ajay Daryanani
ajay.daryanani@rediris.es

Prague, 5th November 2009

- Benefits for multimedia services:
 - ✧ Control access to the service
 - ✧ Adapt the service to the user
 - ✧ Control access to the content
- First two are common practice
 - ✧ Given that the service is linked to the national AAI
 - ✧ What about foreign users?
- Requests for copyrighted/HQ content restriction

- Are multimedia services connected to AAls?
 - ✧ Yes/no/not yet
 - ✧ What usage do you make of the user info?
 - ✧ Do you have users from other federations?
- Is there a need for content restriction?
 - ✧ If yes, why?
 - ✧ From whom?
 - ✧ Do your services support content restriction?
How?

- Reply to the previous slide's questions
- Federated access to services
 - ✧ Study use cases
 - ✧ Study benefits for authenticated users
- Content restriction
 - ✧ Study current usages
 - ✧ Study support from AAI protocols
 - Including authorization
 - ✧ Study extensions to content metadata

- A starting point could be sending a survey to the TF participants
 - ✧ Would clarify the current status
- Create best practice documents
- Optionally, a prototype could be developed
- Liaise with TF-EMC2
 - ✧ Homogenize user information
 - ✧ Status of AAI deployments and protocols
 - ✧ Study adaptation of AAI to support content restriction
