

RIPE Database: a short update

Wilfried Wöber: ACOnet-CERT
for TF-CSIRT, 23rd Meeting – Praha, CZ

January 28, 2008

...since (next to) last update?

- irt: - we made it: now returned by default !!
- abuse-mailbox: added ☹️
- triggered a major rework of the documentation set – done
 - split: 1 formal RIPE document and “regular set”!
- proposals as the result of the DP-TF work
 - see next slides
- REANTER tagged (most of their) resources 😊

The Data Protection TF

- A taskforce is helping the NCC with cleaning up the situation
 - proposals and interim meeting in summer 2007 in Amsterdam
 - next one on Feb. 5, 2008 (input?)
- Is the Resoure Registry Service in the public interest?
 - Yes, nice try, alas... ☹
- More info on TF the at

<http://www.ripe.net/ripe/tf/dp/index.html>

Changes proposed or discussed (1)

- Remove all “orphaned” (person:) objects
 - just a 1st step (approved)
- Remove (or very strictly limit?) the “White-Pages” functionality (approved, ideas for implem.)
- Require a maintainer for *all* objects, *including* person: and role: ! (approved, more or less)
- Proposal for a “new” NRTM service
 - feed without personal data - still useful for CERTs?
 - started discussion on “limit” for queries to live DB!

Changes proposed or discussed (2)

- Review mntnr: object creation
 - only by way of existing maintainer? (open)
 - only manually (again) by way of ripe-dbm? (open)
- How to deal with legacy stuff?
 - problem going away with resource certification?
 - problem being affected by scarcity of IPv4 addresses? (open)
- It is a mess... ☹️ (still)
