Fondation RESTENA

UMTS?

Stefan Winter < stefan.winter@restena.lu >

Basic Idea

- UMTS/GPRS is ubiquitous
- Is expensive for your users
- Especially when roaming
- But: EU strives for regulating data roaming costs!

- You can become data provider
 - Experience in NL
 - Register an APN, reconfig your user's device

- Is it worthwhile to become data (roaming) operator?

More specifically...

- How expensive is it for an NREN?
- If it's too expensive for one NREN, is it possible to have a “TERENA” APN for all?
- Can we offer it for free to our constituency?
- If not, are we really up to do serious accounting on that access channel?
- How about client config (mess? SMS auto-config?)

Thank you!
