

DNSSEC

Milan Sova

Relation to MW

- reliable peer discovery
 - RadSec/eduroam, eduGAIN, ...
- key distribution
- SAML metadata distribution
- ...

Issues

- root still not signed
 - islands of security
 - *realm.eduroam.org*
- resolvers missing
 - “use your DNS server to verify DNESEC for you”
- signing is resource-demanding
- security managed by “database administrators”

Plan Proposal

- Find the interested parties
- Find use cases
 - => explore the technology,
(rules & procedures ?)
- tests & pilots
