

## NEWS FROM TERENA (150)

### TERENA organises 6NET Open Workshop

---

10 June 2004

On 9 June 2003, the 6NET project organised an Open Workshop in Rhodes, Greece, co-located with the TERENA Networking Conference 2004. The workshop discussed the current status of the 6NET project, focussing on innovative aspects such as multicasting, mobility and new applications. It also considered deployment and transitioning issues, drawing on the experiences of 6NET and other IPv6 projects. The workshop, which was organised by TERENA's Kevin Meynell, attracted more than 70 participants.

The workshop programme started with updates on the 6NET and Euro6IX projects, and then discussed the various innovative applications. The programme also contained presentations about such diverse topics as IPv6 development in China, IPv6 security, and Quality of Service mechanisms for supporting Service Level Agreements in IPv6.

The full programme and presentation slides from the workshop are available from the 6NET website at:
