TERENA organises MOME session on traffic measurement and monitoring

10 June 2004

On 8 June 2003, the MOME project held a session on traffic measurement and monitoring issues at the TERENA Networking Conference 2004 in Rhodes, Greece. MOME (Monitoring and Measurement Cluster) is a co-ordination action that is funded as part of the European Union's Sixth Framework Programme. The session in Rhodes outlined the importance and challenges of traffic monitoring and measurement issues and provided an insight to the achievements of the projects participating in the cluster, for example, INTERMOM and SCAMPI. The workshop, which was organised by TERENA's Baiba Kaskina, attracted more than 40 attendees.

The full programme and presentation slides from the workshop are available from the MOME website at:
