

Network Performing Arts Production Workshop

15, 16 & 17 June 2011, Barcelona, Spain

The third European Network Performing Arts Production workshop will be hosted by the **Gran Teatre del Liceu in Barcelona.**

The workshop will emphasise the equipment and staffing requirements for interactive performing arts education, multi-site performance events and high quality netcasting over high-end features that only advanced research and education networks can deliver.

The June workshop targets people in the research and education community who produce performing arts events (academies or colleges of music, dance, arts etc.) and want to explore the possibilities and challenges of using advanced Internet and related services in their teaching, rehearsals and performances.

People involved in audio/video production in other domains can also greatly benefit from the workshop presentations and practical hands-on sessions with the leading edge advanced applications and services that research and education networking organisations can offer.

Main topics will cover:

- » Digital Video Transport System (DVTS and HDVTS) and other video transport tools such as Conference XP and LOLA
- » Full audio and echo control computerised management
- » Real-time monitoring of network performance and problem solving
- » Presentations and demonstrations of various Performing Arts projects

The workshop topics will be oriented towards participants' needs, in order to maximise the benefit to users with a non-technical background.

Local technical support will be provided by RedIRIS, the Spanish National Research and Education Network (NREN) and CESCA, which manages the regional network in Catalonia (Anella Científica). As with the previous events, the workshop will be coordinated by TERENA and Internet2, with technical expertise provided by GARR, the Italian NREN.
