

RIPE Database: a short update

Wilfried Wöber: ACOnet-CERT
for TF-CSIRT, 22nd Meeting – Oporto, PT
September 20, 2007

What happened since last update?

- irt: - we made it: now returned by default !!
- abuse-mailbox: added
- triggered a major rework of the documentation set
- first proposals as a result of the DP-TF work
 - see next slide
- major discussions due for RIPE55

The Data Protection TF

- The RIPE database is considered to NOT be in line with European and Dutch (in particular) data protection regulations ☹
- A Task-Force was formed to help the NCC with cleaning up the situation, proposals and interim summer meeting in Amsterdam
- Service in the public interest?
- More info on TF at

<http://www.ripe.net/ripe/tf/dp/index.html>

Changes proposed or discussed (1)

- Remove all “orphaned” (person:) objects
 - just a 1st step
- Remove (or very strictly limit?) the “White-Pages” functionality
- Require a maintainer for *all* objects, *including* person: and role: !
- Very closely look at the NRTM service
 - no new feeds, AUP/new contracts, review existing
 - usefulness of feed without person:/role:?

Changes proposed or discussed (2)

- Review maintnr: object creation
 - only by way of existing maintainer?
 - only manually (again) by way of ripe-dbm?
- How to deal with legacy stuff?
 - problem going away with resource certification?
 - problem being affected by scarcity of IPv4 addresses?
- It is a mess... ☹️

.
