

***Dealing with the whole country:
creating a National CSIRT***

A decorative graphic at the bottom of the slide features a blue-to-teal gradient background. It contains two heartbeat lines: a white one in the upper half and an orange one in the lower half. Both lines start with a horizontal segment, followed by a jagged heartbeat pattern, and end with a horizontal segment that terminates in an arrow pointing to the right.

Baiba Kaškina, CERT.LV

31.01.2012. Rome, Italy

Outline

- Short history & IT Security law
- First year results
- How to deal with the whole country
- Future plans

Short history & IT Security law

CERT.LV

- Operational since 1 February 2011
- Operates on the basis of IT Security Law
- Tasks delegated to Institute of Mathematics and Computer Science, University of Latvia
- Merged CERT NIC.LV + DDIRV
- State funded
- Year 2011 - 10 people, 5 FTE

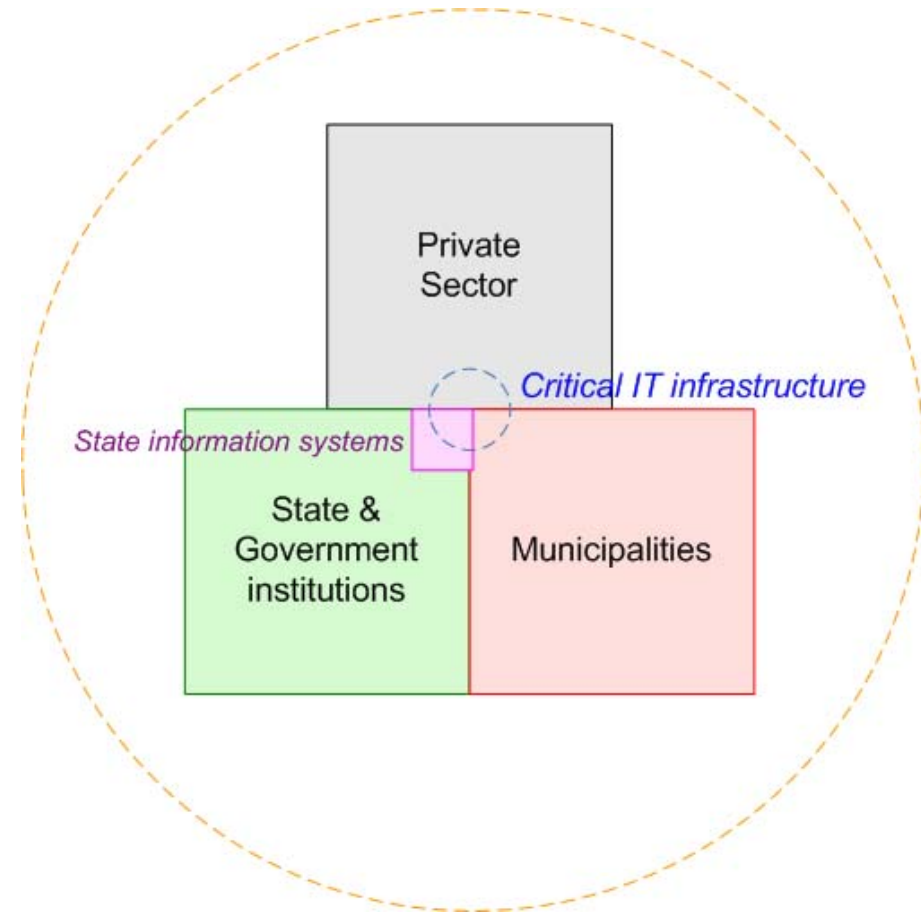

CERT.LV

- Experience in security incident handling since 2006 (LATNET CERT, CERT NIC.LV)
- Full member of FIRST since 2009
- Accredited by Trusted Introducer since 2007

CERT.LV Constituency

IT Security law

- In force since 1 February 2011
- Implemented in 2011
- Sets CERT.LV tasks and responsibilities
- Sets responsibilities for:
 - Public sector
 - ISPs
 - Critical IT infrastructure owners

IT Security law – Public sector

- In every institution – responsible person for IT security, his/her tasks:
 - To establish IT security documents for institution
 - To organise IT security audits
 - To educate at least once per year all employees
 - To report CERT.LV security incidents
 - To participate in CERT.LV seminars

IT Security law - ISPs

- All ISPs have to submit to CERT.LV
“Action plan for continuous operations”
- Report to CERT.LV major incidents
- CERT.LV can request
 - IT Security documentation
 - IT Security audits
 - Disconnect of an end user

IT Security law - disconnect

- CERT.LV can request disconnect of an end user
- To up to 24 hours
- If threatens rights of other users, their IS or security of networks
- Reasoning needs to be provided
- Documentation in place, never implemented

IT Security law – Critical infrastructure

- List – State secret
- Report incidents to CERT.LV
- Establishes IT Security documentation
- CERT.LV can do pentesting

First year results

Monitoring of Latvian IT space and incident response

Situation in Latvia

- Overview of infected IPs in Latvia – on 31.12.2011. 3300 infections (bots)
- Different information sources
- Only part of infections become incidents in tracking system
- Cooperation with ISPs

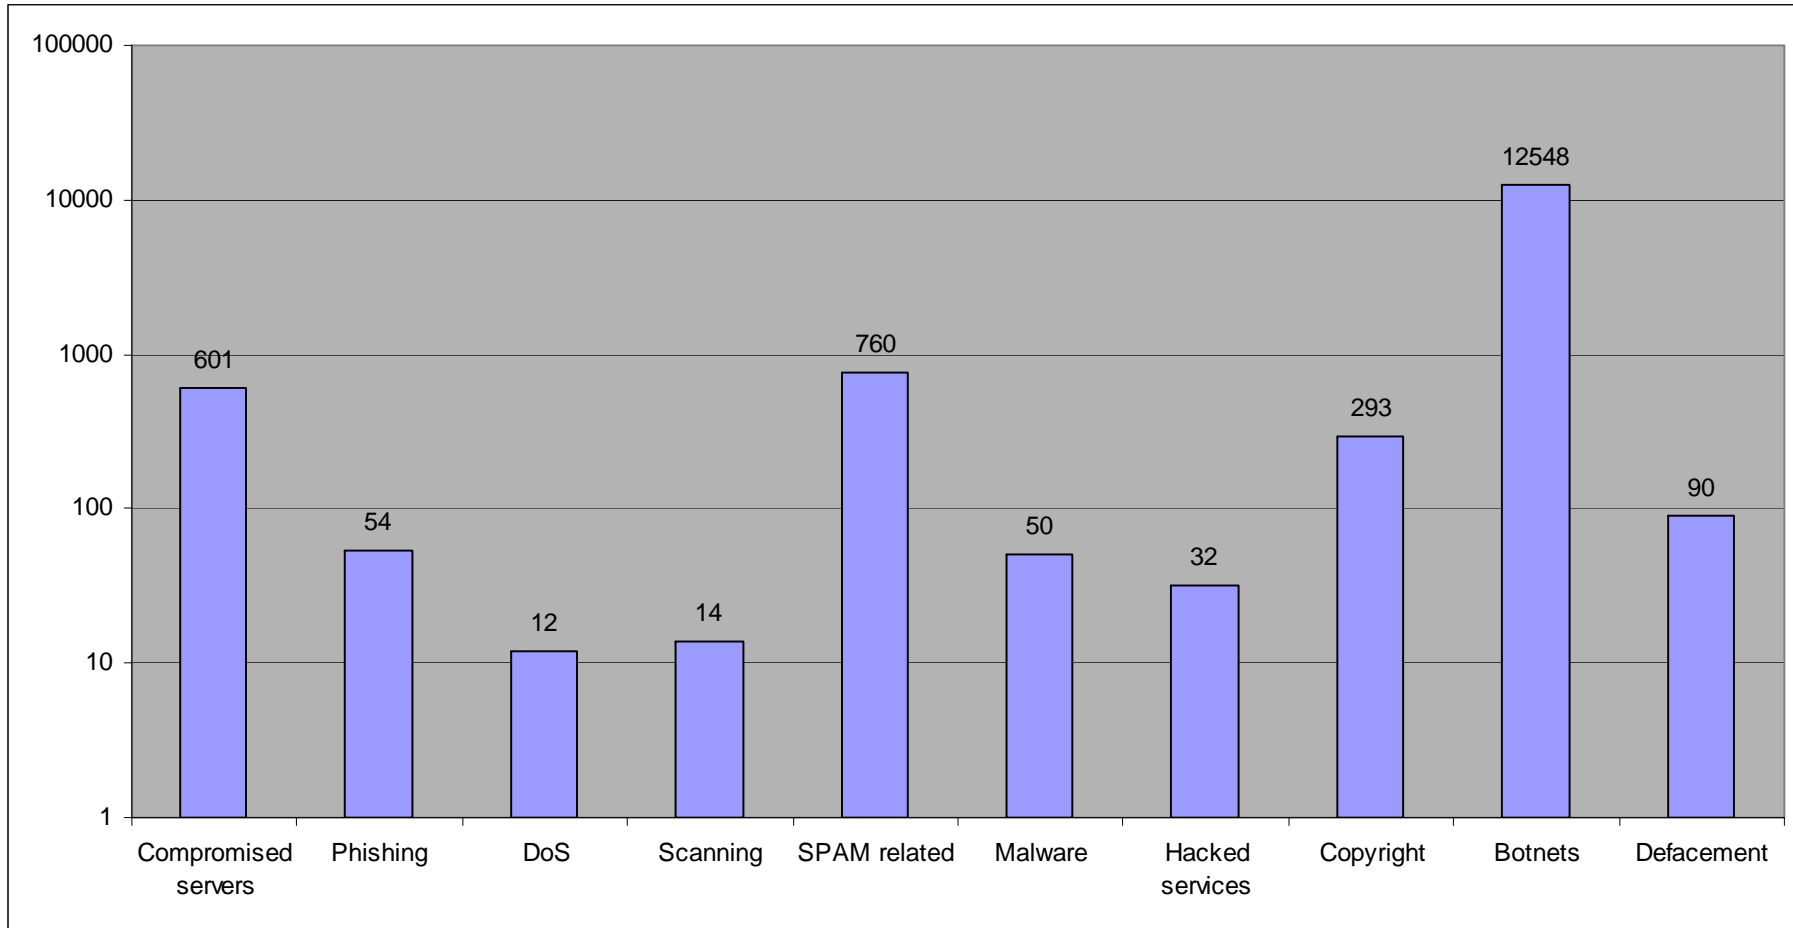

Incident response

- Dealt with almost 15000 incidents
- More incidents reported by individuals
- More frequently report those who already have had a good collaboration experience with CERT.LV

CERT.LV incident statistics

Awareness raising, education,
exercise organization,
recommendations

Information, recommendations

- Website, information on newest viruses and threats
- Articles, suggestions
- Examples for IT security principles and rules
- Portal www.esidross.lv (“be safe”)
- Twitter account “certlv”

VIDEO: Kā justies droši elektroniskā vidē?

Jūties droši elektroniskā vidē from EsiDrossLV on Vimeo. CERT.LV piedāvā jums noskatīties Latvijas Universitātes Informācijas sistēmu drošības pasniedzējas Ilzes Murānes...

Uzmanību! Saskaņā ar CERT.LV datiem, Jūsu dators ar IP adresi [redacted] ir inficēts ar datorvīrusu! [Vairāk informācijas.](#)

Laipni lūdzam mājaslapā

ESI DROŠS!

Šī mājaslapa ir paredzēta ikvienam, kurš rūpējas par sava datora drošību un savu drošību internetā.

Events, presentations

- “Be safe -1” and “Be safe-2” seminars for state institutions
- IT Security exercises
 - Theoretical
 - Technical
- Seminar for Internet Service providers
- Targeted events
 - Legal issues
 - How to organize exercises
- Participation in World Wide Safer Internet day

Contacts

- Responsible persons for ~400 institutions
- Actions plans for ~30 ISP (out of ~400)
- > 500 people participated in CERT.LV events

How to deal with the whole country

We need automation

- Collaboration with ISPs
- Abuse Helper
- To separate incidents in two groups
 - Serious ones – processed by hand
 - Mass infections - processed automatically

Not all are equal 😊

- Which customers are more important?
- What should be processed by hand?

Incident processing – the goal

- Manual processing
 - All high priority institutions
 - All human submitted incident reports
 - Legacy – SigmaNet and Latnet incidents
- Automatic processing
 - All automated reports (via Abuse Helper)
 - Daily reports to ISPs

Future plans

Great changes

- 2,5 times more money from 1 March 2012
- Increase staff to 10 FTE
- New incident classification, more automation
- Ability to participate in more exercises, events, etc.
- Establishment of IT Security Guards
- More PR and awareness raising activities

Summary

- All parts of IT Security law are in place
- Established contacts with all parts of constituency
- People report more incidents
- Gaining political attention
- Need for incident response automation
- Growing responsibility

Thank you!!!
